Security The Autodesk security model was designed to allow an application to control who can interact with what parts of the application (for example, when they can work with a model or when they can work on it). The Autodesk security model enforces rights to edit data and to create new data and allows the ability to control exactly which user can access which functions or features within the application. Drafting and view The user interface of AutoCAD is designed to mimic its 2D drafting tools and to allow the rapid creation of new and editable drawings. Views, axis, dimension styles, and other drawing options are created from a toolbox on the left side of the screen, on the right, the commands are organized into groups. These include commands to create, edit, and view drawings (the primary commands). The interface can be customized. The toolbars can be hidden, turned off, or rearranged to suit the user's preference. The menus can also be customized with additional or less commands. The user can access them by selecting them from a drop-down menu, by a hot key, by default icons, or by the menu list of the drawing window.
