Core functions The autocad family of Windows programs include AutoCAD, AutoCAD LT, AutoCAD Map 3D, AutoCAD Architecture, AutoCAD Mechanical, AutoCAD Electrical, AutoCAD LT Architecture, AutoCAD Electrical Scheduling, AutoCAD Electrical 3D, AutoCAD Inventor, Autodesk Revit, AutoCAD Map 3D, AutoCAD 360 and AutoCAD 360 Architecture. Some are Autodesk Architectural Desktop products. AutoCAD LT and Architectural Desktop are based on R14. The latest release is R2015. Most of the Autodesk AutoCAD family have since been replaced by the new Architecture product as well. Architecture Architecture provides a cloud-based, on-demand service for architecture and engineering design, available on the cloud, which has made it possible to use a digital copy of architectural documents such as blueprints to create new drawings on the same device as the original, regardless of where the data is stored. Additionally, the software provides an architectural visualization module for 3D models and floor plans as well as rendering that can be used in conjunction with architects' drawings for presentations and documentation. Architects can use the software for on-screen design presentations as well as to prepare detailed floor plans and specifications. The software is used to create floor plans in the form of a 2D image or model, 2D elevations, or 3D models and designs. A standard fee is charged for the product. Autodesk Revit is a software for 3D design. The Revit Architecture program enables users to design in 3D space, view and analyze the 3D space, and produce and customize 2D drawings on the fly. Revit is often used in the industry for design-build, and can be used for utility, commercial, institutional, residential, and retail projects. The entire framework of Revit, in addition to all of its data models, is always based on the latest version of Autodesk's 3D design software, Inventor. Autodesk AutoCAD Map 3D is a geospatial vector-based application for managing map data. It allows importing and exporting of map data in various formats, creating and editing map packages, map layers, maps, and map symbology, and converting map data between 2D, 3D, or KML formats.
