Q: What to do when a question is closed too quickly? This question has been put on hold because the issue isn't a common enough issue (people can reproduce, it's a problem, it's specific to their installation, etc.), and there is no obvious solution to it. I'm aware that questions like these are frequently closed when they're of a user's fault and have resolved the issue. However, this isn't always the case and I believe this community agrees. I'm curious to hear what the community thinks of this issue in general. Is the assumption being made that if the question is closed too quickly, it must be of a user's fault and there's no solution? If not, what is the right recourse to such a case and when should a question be closed too quickly? A: I believe this community agrees. Only one thing can be said for certain here, we're a consensus based community. Anything here not unanimously supported is only an assumption. I'm curious to hear what the community thinks of this issue in general. Is the assumption being made that if the question is closed too quickly, it must be of a user's fault and there's no solution? If not, what is the right recourse to such a case and when should a question be closed too quickly? I think in
