KeyMacro is a simple (yet powerful) macro recorder. It lets you record keystrokes on your computer. Creating KeyMacro with Keystrokes As the name suggests, KeyMacro records keystrokes. To do so, you specify the keystrokes that you wish to

capture by clicking on the KeyMacro icon on your desktop. Then you can choose the number of keystrokes to record from the box that appears on the right. When you save, you will have a recording of all the keys pressed during the current session. As you can see, the tool allows you to choose the target file format. That is, you can capture the files in two formats: WAV and TAB. When you hit the “Start” button, the software will capture all the data. You can stop the process at any time by clicking on the “Stop” button. Storing Keystrokes as a Macro After the recording is complete, you can play back the file using the built-in player. Also, you can create a shortcut using the options that appear on the same tab. KeyMacro is free to use and requires no installation. That is why it has become very popular among users of different operating systems. To conclude This is one of the few software tools we have found that captures all the keystrokes on your PC. It is easy to use and is rather flexible, so it is sure to help you. AVS Video Converter is a powerful video converter that helps you convert video files to and from a wide range of video formats and codecs with a high level of quality. AVS Video Converter features: Supported Converting formats: AVI, MPEG, MPG, WMV, ASF, FLV, 3GP, MTS, MP4, MOV, RM, RMVB, TS, VOB, MKV, MP3, AAC, AC3, APE, FLAC, OGG, WAV, OPCM, WMA, and more. Coder to other formats: You can convert any video format into any other video format you want. Multi-task Mode: One file can be converted into more than one format. Support interactive conversion: Add or remove items from the profile you have defined. Automatically save all the settings: To make it easy to recall a profile in the future, you can choose any settings as the 1d6a3396d6

StarWind Virtual CD

StarWind Virtual CD provides a simple but powerful way to create your own virtual optical drives. It allows you to create a virtual optical drive (DVD/CD/BD) and convert existing images (ISO and MDS) to that drive. It can mount ISO, MDS, UDF, BIN, CUE, CDP and many other types of ISO, MDS, UDF image file. It can use the virtual drive as a usual drive. The virtual drive has an interface just like a real drive, it can be played with a normal DVD player. The virtual drive can be automatically mounted at the boot time, so it is ready to use as soon as the computer is booted. It can be automounted to a virtual drive on the fly. It has a powerful configuration tool, where you can configure what you want the drive to be like. You can configure whether you want the virtual drive to be read only, write only, it can be a software virtual drive, or even a hardware virtual drive. The virtual drive can be located at a specific folder. It can list all virtual drives and optical drives, you can select a certain drive to play. It has built-in tools to rip, split and copy ISO image. It has built-in tools to compress, protect, encode ISO, MDS and BIN image file. It has a feature to make any normal ISO/MDS file a virtual drive, it allows you to browse and play ISO/MDS image file as a virtual DVD/CD/BD drive, it can be copied to another disk to form a multisession DVD/CD/BD. Advanced Mode: StarWind VCD Advanced mode allows you to work with large images, as well as utilize a lot of virtual drives. You can directly set the configuration in Advance mode.
